Certified Practitioner – AANHCP  
Instructor – The Ohio State University Agricultural Technical Institute

◇  
**Clinic Fee – \$300**

(Materials, lunch & refreshments included)

## About the Clinic

Intended for the experienced hoof care professional, the first part of this dual-themed clinic challenges the audience to realign their approach to several of the equine world's firmly-held beliefs and practices about horses and horse management, and equips them with the knowledge and tools necessary to present science-based alternatives.

In the second part, the clinic familiarizes participants with the underlying anatomy and bio-mechanical theory necessary to successfully trim the abnormal hooves associated with certain pathological conditions such as severe laminitis, injury, and chronic imbalance, in accordance with natural hoof care principles. Large-screen live video is utilized to provide an unobstructed view of all clinic materials

Each participant will also receive a booklet containing assessment & course-of-action information with high-quality color photographs and radiographs of the hooves.

## About the Clinician

Steve Hebrock began his hoof care odyssey in 1993 after acquiring his first horse. Frustrated by the often-illogical ideas and practices that continue to

dominate traditional hoof care, he undertook a journey of intense study of trimming, shoeing, and movement theory from a diverse range of sources. In 2000, he discovered Jaime Jackson's book The Natural Horse,

and has relentlessly pursued the wild horse model ever since. An award-winning electronics design engineer, sound recording engineer, and musician, he currently teaches (among other subjects) Farriering at The Ohio State University Agricultural Technical Institute. His ongoing passions include servicing his equine hoof clients, increasing public awareness of equine health issues, and researching various aspects of equine movement and hoof care.

**Registration Deadline**  
**April 22<sup>nd</sup> 2012**
